

MORE PAYLOAD PAYS

NEW

Strategic placement of varied gauges of steel aid in an overall body weight reduction resulting in a net increase of 450 lbs of usable vehicle payload

NEW

Refined ABS partition is equipped with a lockable sliding cab access door with a window. Stainless steel ball bearing slides and rubber engagement bumpers ensure free and quiet movement

NEW

A 14-gauge corrugated steel floor in the cargo area provides maximum strength for transporting those large and oversized items needing a secure/covered location

Significant weight reduction allows for you to carry all of those necessary tools and that extra equipment needed to complete the task at hand without ever having to leave the jobsite, saving you valuable time and money.

The Knapheide KUV helps keep you organized and productive by allowing you to sort and separate

all of your tools and parts in one of the many easily accessible side compartments. Take advantage of the maneuverability inside the large covered cargo area for your larger parts that need to be out of the weather.

Security and safety are a must in your book and we agree. Side compartment doors come

standard with either E-locks or a Master locking system and all compartment doors can lock independently. A grab handle and optional bumpers with a step ensure you safely get yourself, and the parts and products you need, to complete your job safely from the covered cargo area.

**WORKING OUT OF A
KNAPHEIDE KUV ISN'T WORK AT ALL**
